

Colorectal Cancer screening has never been easier! The new Fecal Immunochemical Test (FIT) is an at home stool 🐞 test that needs only one sample. The new test is just as accurate as the old one, but easier and more convenient. If you're between the ages of 50 and 74, you are fit to take the FIT - talk to your health care provider to pick one up at your local clinic!

The FIT is available across the NWT in all health centres and regional laboratories. If you're between the ages of 50 and 74, talk to your health care provider so you can complete the One and Done FIT for colorectal cancer screening.

Let's Talk
About Cancer
